		Product name BLOCK DUMMY WITH BASE	
		Article number 11 072	
		Certificates/Attestations/Approvals Declaration of Conformity to Standards	
Weight	Package dimensions	Unit pc.	
Complementary products			
Product description It consists of a base and an adjustable arm with a plate imitating block. The plate of the block is made of two layers of foam with dimensions of 660mm (width) x 500 mm (height) x 40 mm (thickness). Flexible foam absorbs the ball's speed, preventing it from bouncing under the attacker's legs. The angle of inclination of the dummy can be adjusted. The plate of the block can be replaced with other elements of the set: a ring for aiming with a service, a device for measuring the height of the vertical jump. The base consists of a leg with load and a guide arm, the load is 15 kg.
